Presentation Guidance

Quantitative Reasoning II (INF 1220)

One slide, 5 minutes including questions

Everyone presents their project to their section. The presentation is not graded. Your classmates see what everyone else has been working on, and you practice speaking about your project.

1. When you present

Section	You present	Your slide is due
001 (MW 11:30)	Wednesday, November 4 or Monday, November 9	08:00 that morning
002 (TR 15:15)	Thursday, November 5	08:00 Thursday, November 5
003 (TR 08:30)	Thursday, November 5	08:00 Thursday, November 5

Section 001 presents over two days. The sign-up sheet was sent via email.

2. Your slide

Build your slide from the slide template on the course site. It should contain the following:

- your research question;
- your data: what it is, what one row is, how many rows after your filters;
- one table or one figure;
- your answer;
- your biggest limitation.

Put your name on it and submit it to Populi by 08:00 on the morning you present. I will compile all of the slides into a single deck to minimize tech issues.

3. Presenting

Talk about what is on your slide rather than reading it. The slide is very brief, and I expect you to speak about your project beyond what's on the slide: why you chose the question, some of the big decisions you made along the way, challenges you faced, maybe supplemental findings. If your results surprised you, or the work did not go the way you planned, feel free to discuss this during your presentation–these experiences provide valuable insights!

You may bring notes, though I would not suggest it. Presenters with notes often end up reading off of them. You should know your project well enough to speak about it for a couple of minutes off the cuff.

Students will be encouraged to ask questions during the presentation. Your presentation and the questions together are capped at 5 minutes.

4. If you present before November 9

Everyone except section 001's Monday group presents days before the project is due, so you are not expected to have a finished analysis yet. The questions you get may serve as useful feedback that you can incorporate into your final deliverables.
